

ANA and StarFlyer to Code-share on Tokyo – Osaka

TOKYO August 6, 2008 ANA and StarFlyer will commence code-sharing on four daily flights between Tokyo's Haneda Airport and Osaka's Kansai Airport from November 1 this year.

The two Japanese airlines have been co-operating since February 2006, when StarFlyer started using *able*, ANA's reservation system, and ANA training facilities. The two have had a code-sharing agreement on StarFlyer operated flights between Haneda and Kitakyushu in southern Japan since June 2007. This latest development comes at the behest of StarFlyer for co-operation on its flights between Japan's two main metropolitan centres.

StarFlyer will operate the Haneda-Kansai flights out of the Terminal 2, ANA's base; however its Kitakyushu flights will continue to operate out of Terminal 1. To facilitate ease of boarding, ANA self-service service units have been in place at Terminal 1 and also at StarFlyer check-in counters in Kitakyushu Airport since the beginning of the code-sharing agreement. StarFlyer boarding gates also make use of ANA's 2D bar-code scanning technology for simple and convenient boarding.
