## NOTES

- ■Customers requiring an Oxygen Cylinder, Respirator, Incubator and/or Portable Oxygen Concentrator (POC) on board, must have a signed medical certificate (MEDIF) by doctor verifying that he/she is fit to fly.
- The power outlets on the plane do not guarantee the provision of stable power. They should not be used for medical equipment that may affect the health condition of customers except CPAP. We recommend customers to prepare batteries for use with medical equipment, especially for the customer who uses Portable Oxygen Concentrator and Respirator to bring enough batteries power to last for 150% of the expected flight time.
- ■If you bring in oversized medical equipment that cannot be stored under the front seat, you will need to purchase another ticket for the seat.

※Regarding to the spare batteries that carry on-board.

Lithium battery - Lithium content not more than 8g. There is no quantity limited if the lithium content is under 2g/pc. Lithium-ion battery - Watt hour rating of not more than 160Wh. There is no quantity limited if Watt-hour rating of not more than 100Wh.
